

The lab, not the label.

The vertically integrated lab behind nearly three decades of prestige skincare, shipped under leading prestige brands and through five-star spa and luxury hospitality programs worldwide.

Formulation, stability, and scale under one owned, FDA-registered US roof, direct to the chemists.

Nearly 30

years of prestige formulation, founded 1997

5,000+

formulations developed in-house

FDA • cGMP • ISO 22716

registered, compliant, third-party certified

One roof

cosmetic and OTC under one owned facility

THE PROBLEM WE SOLVE

Most brands outgrow the manufacturer that launched them: production queues behind bigger clients, a hero formula on a shared stock base, claims borrowed from an ingredient supplier's data sheet, and technical limits arriving exactly when the brand is ready to scale.

WHY WE'RE DIFFERENT: FOUR THINGS THAT HOLD

01 Original formulation, protected by contract

Developed for your brief, never a shared stock base. Confidentiality, non-use, controlled access, and a defined buyout path to ownership.

02 Independent proof for your claims

Substantiation runs through independent third-party labs on your finished formula, not an ingredient supplier's data sheet. Stability is run in-house; analytical, microbial, SPF, and benzene testing are independent.

03 Clean-clinical depth, defined

Clinical-grade efficacy through clean, well-tolerated systems. Texture, stability, tolerance, and claim support move together.

04 A brand-operator's perspective, firewalled

Prestige-brand operators are among our owners, so we read buyers, claims reviewers, and consumers. Your work is walled off in writing.

WHAT WE MAKE

- **Sensitive Skin & Barrier Repair.** Our home turf: performance without irritation.
- **Clean Longevity.** Peptides, NAD+ precursors, and emerging actives, stabilized cleanly.
- **Acne & Blemish.** Tolerance-first OTC and cosmetic systems, claim lanes respected.
- **Mineral-First Sun Care.** OTC SPF engineered for skin feel and photostability.

Winning brands need more than a batch record: original formulation, independent proof for the claims you'll print, and a partner with the discipline to scale prestige skincare without losing control of the formula.

ENGAGEMENT & COMMERCIAL POSTURE

Selective by design.

15,000

unit minimum; multiple SKUs can aggregate to reach it

4 to 8 weeks

to first formulation submissions from an agreed brief

5 partners

concurrent large-scale partners, a deliberate cap

Engagements: new product development, reformulation, expansion lines, pilot runs, regulatory support, and claim-support planning. Pricing is quality product at a quality price, quoted once formula direction and production assumptions are clear. A founding-partner, grow-with-us path exists by selective invitation for rare, high-conviction founders.

HOW A PROJECT MOVES

Discovery & scoping	Development & approval	Sourcing & incoming QC	Production & QA release	Regulatory outputs
---------------------	------------------------	------------------------	-------------------------	--------------------

Incoming raw-material identity (FTIR) and stability are in-house; every project runs on our internal stage-gated tracker, so you always know where your product is and what happens next.

YOUR IP STAYS YOURS

- Mutual NDA before formula data moves.
- A contractual non-use clause, plus a 24-month bar on anything substantially identical.
- A defined fee-and-volume buyout path to formula ownership, identified up front.
- One owned US roof. No offshore handoffs, no brokered development network.

ON THE RECORD

- Multiple Allure Best of Beauty and Readers' Choice wins (2009 to 2025), earned by prestige brands we formulate and manufacture, cited with permission.
- Original, patented multi-antioxidant botanical chemistry: not a stock base.
- Decades supplying five-star spas and luxury hospitality worldwide.
- We don't name our clients. Specific case histories are available under NDA.

Start with a scoped formulation consult.

Bring a brief, a reformulation problem, a category expansion, or a formula that has outgrown its first manufacturer. We'll map feasibility, timeline, testing needs, and approach with the chemists directly. No obligation.
